SAARTHI

Your guide through public services

A Day in Riya's Life

Riya wants to get her sonography done.
Here's how her day **usually** goes, after taking a half day from her office.

1 Needs a Sonography

Riya's doctor recommends a sonography. She's unsure what to do next.

2 Searches for Information

She searches online for the right place, cost, and required documents — but finds confusing and scattered info.

3 Calls and Asks Multiple Places

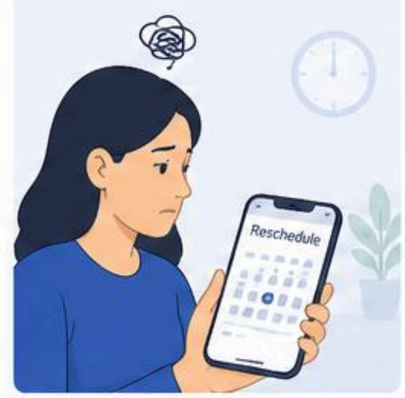

She calls a few centers and asks around. Everyone says something different.

4 Visits the Center in Person

She reaches the center, but the doctor is not available or the slot is full.

5 Reschedules and Tries Again

She has to reschedule and visit again another day, losing time and energy.

The Problem

Users struggle to complete simple services due to **lack of clarity, guidance and real time information**

Unclear Process

Users donot know what to do next or which steps to follow

Scattered Information

Information about centers, documents, costs and availability is hard to find

Wasted time & effort

Multiple calls, visits and rescheduling lead to frustration and delays

The lack of clarity and real time guidance turns a simple task into a **tiring and uncertain experience.**

Understanding the User

So we decided to simplify the journey by focusing on **clarity, guidance and real time support.**

Research Methods Used

Interviews

Spoke with 4-5 users across different age groups

Surveys

Collected 20+ Responses to understand common pain points.

Observations

Visited 5+ centers and observed real user interactions

Key Insights

Users donot know where to start

No clear entry point or guidance.

Document requirements unclear

Uncertainty about what is needed leads to repeated visits.

Navigation depends on asking others

Users may rely on word of mouth.

Staff availability is uncertain

Unclear availability causes delays & increase frustration

Design Direction

So we decided to simplify the journey by focusing on **clarity, guidance and real time support.**

1 Step by step guidance

Users are guided at every stage instead of figuring things out

2 Pre - visit clarity

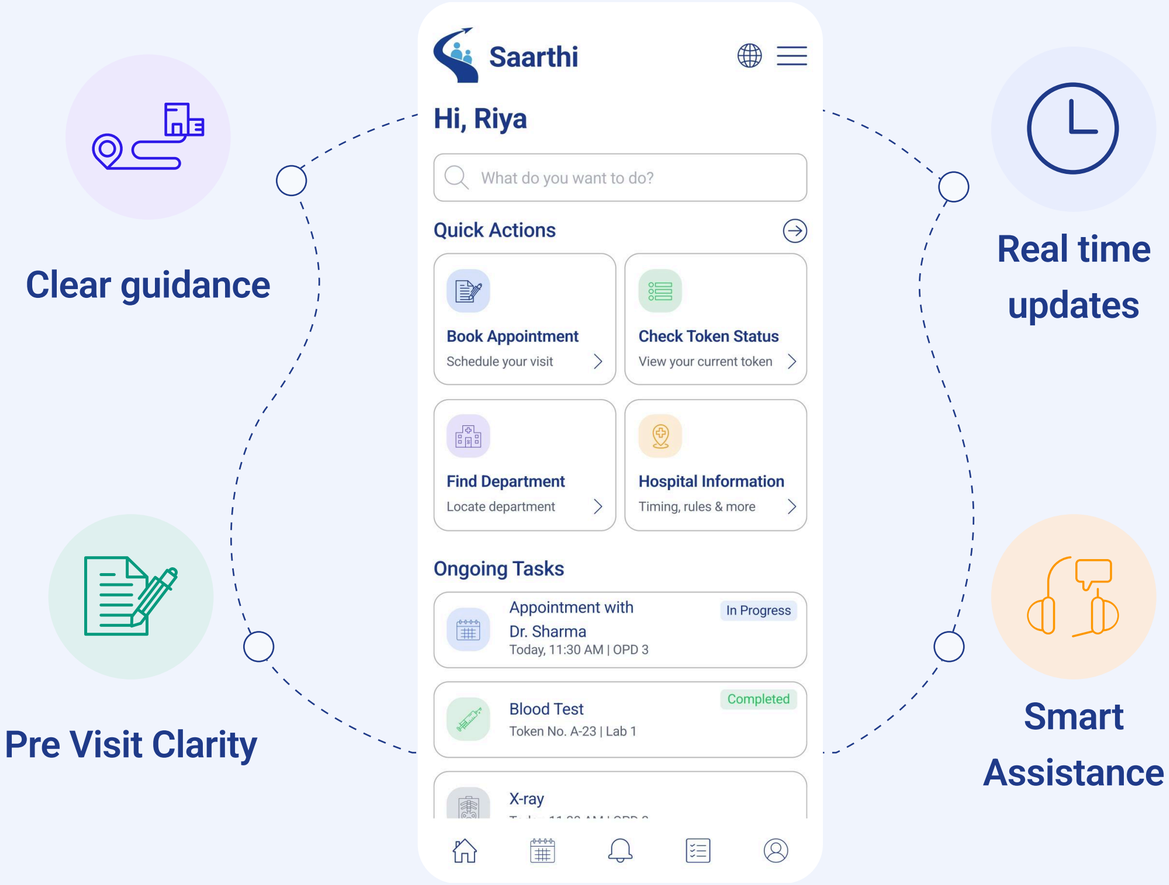

Show Documents, cost and requirements before arrival

3 Real time assistance

Navigation, queue updates and staff availability in real time

4 Task based experience

Focus on what the user wants to do, not on departments.

A simple, guided and informed journey from start to finish.

Starting the Journey

Users begin their journey by scanning a Qr or selecting a tasj. The system identifies their context and guides them forward.

1 Scan / Enter

Scan the center QR code or click to continue or start a new task

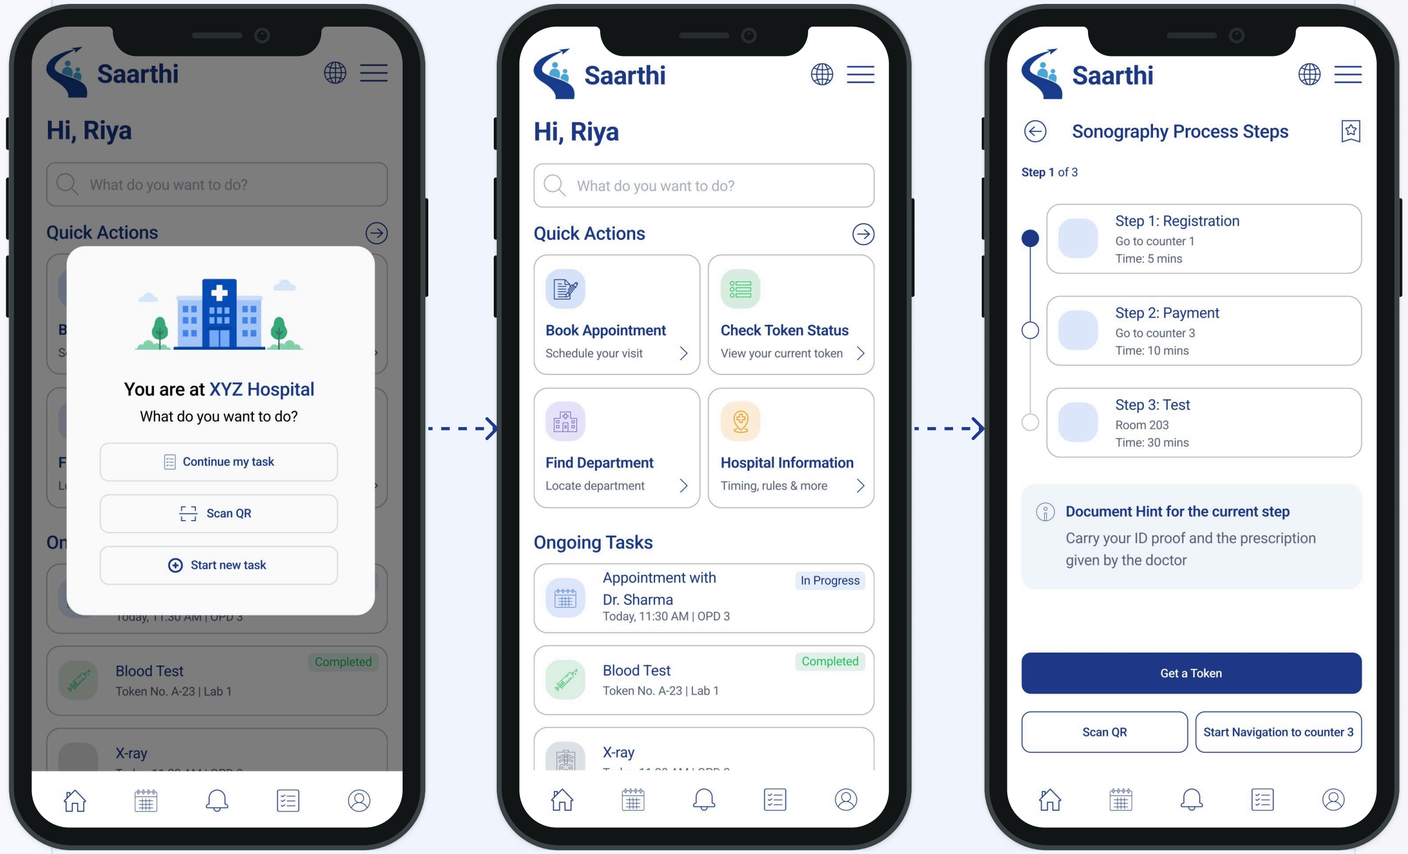

2 Select Task

Choose the service you need help with from the available options

3 Begin Journey

We will show you what to do next and guide you through every step.

1 Scan / Enter ---------- 2 Home ---------- 3 Further Process

From Confusion to Clarity

Saarthi transforms confusing, uncertain experiences into guided and predictable journeys.

Saves Time
Clear steps, real time updates and smart guidance at every step

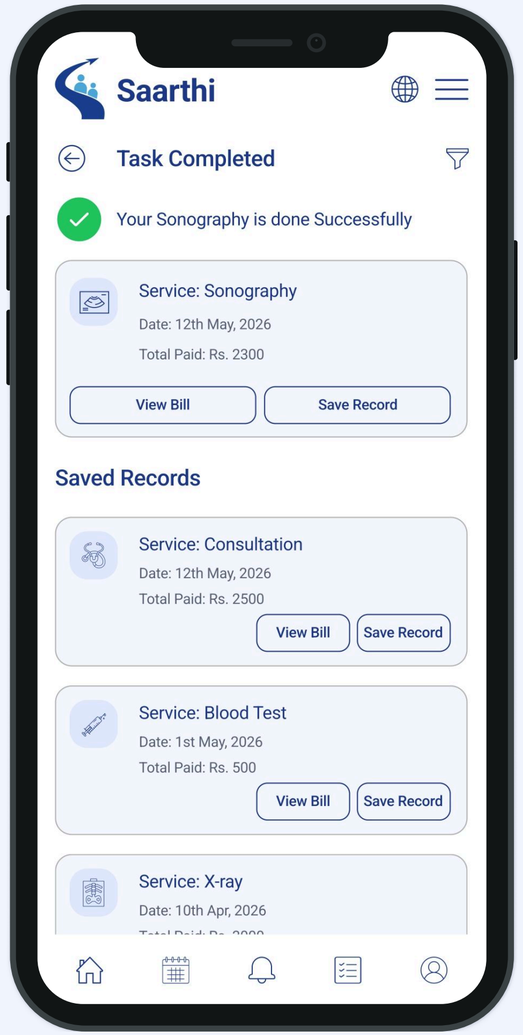

Builds Confidence
Users know what to do, where to go and what to expect

Reduces Repeated Visits
Pre visits clarity and document readiness minimizes unnecessary trips.

Less Dependency, More Dignity
Empowering users to navigate services independently and with ease.

Because every service should be **simple**, dignified and **human**.

A simple entry flow that gets users started in seconds and sets the context for a guided experience.
